

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in this application.

Listing of Claims:

Claims 1-6 (Canceled).

Claim 7 (Previously Presented): An exercise system, comprising:

a plurality of exercise terminals; and

a computer connected to the exercise terminals via a communication link, the computer including an interface usable to reserve exercise terminals for future use so that exercisers other than reserving exercisers are locked out from using reserved exercise terminals.

Claim 8 (Previously Presented): The exercise system according to claim 7, wherein reserved exercise terminals are responsive to predetermined inputs to permit use thereof by reserving exercisers.

Claim 9 (Previously Presented): The exercise system according to claim 8, wherein the predetermined inputs comprise keypad inputs.

Claim 10 (Previously Presented): The exercise system according to claim 8, wherein the predetermined inputs comprise card reader inputs.

Claim 11 (Previously Presented): The exercise system according to claim 8, wherein the predetermined inputs comprise passwords.

Claim 12 (Previously Presented): The exercise system according to claim 8, wherein the predetermined inputs comprise exerciser identifiers.

Claim 13 (Previously Presented): The exercise system according to claim 7, wherein the exercisers other than the reserving exercisers are locked out from using reserved exercise terminals for a predetermined period of time.

Claim 14 (Previously Presented): The exercise system according to claim 7, wherein the interface comprises a display showing reservable exercise terminals.

Claim 15 (Previously Presented): The exercise system according to claim 14, wherein the display displays the current use status of the exercise terminals.

Claim 16 (Previously Presented): The exercise system according to claim 15, wherein the current use status comprises time remaining in exercise programs for currently used exercise terminals.

Claim 17 (Previously Presented): The exercise system according to claim 14, wherein the display displays graphical representations of the exercise terminals.

Claim 18 (Previously Presented): The exercise system according to claim 7, wherein the interface is usable to reserve exercise terminals for use at particular times of day.

Claim 19 (Previously Presented): The exercise system according to claim 7, wherein the interface is usable to reserve particular exercise terminals for use when these terminals become available.

Claim 20 (Previously Presented): The exercise system according to claim 7, wherein the interface is usable to reserve the first available exercise terminal of a particular type for use.

Claim 21 (Previously Presented): The exercise system according to claim 7, wherein the computer generates notifications to reserving exercisers when reserved exercise terminals are available for their use.

Claim 22 (Previously Presented): The exercise system according to claim 21, wherein the notifications are communicated via exercise terminals currently used by reserving exercisers.

Claim 23 (Previously Presented): The exercise system according to claim 21, wherein the notifications are communicated via a paging system.

Claim 24 (Previously Presented): The exercise system according to claim 21, wherein the notifications are communicated via a speaker.

Claim 25 (Previously Presented): An exercise system comprising a plurality of exercise terminals, at least one exercise terminal including an interface usable to reserve exercise terminals for future use so that exercisers other than reserving exercisers are locked out from using reserved exercise terminals.

Claim 26 (Previously Presented): The exercise system according to claim 25, wherein reserved exercise terminals are responsive to predetermined input to permit use thereof by reserving exercisers.

Claim 27 (Previously Presented): The exercise system according to claim 26, wherein the predetermined inputs comprise keypad inputs.

Claim 28 (Previously Presented): The exercise system according to claim 26, wherein the predetermined inputs comprise card reader inputs.

Claim 29 (Previously Presented): The exercise system according to claim 26, wherein the predetermined inputs comprise passwords.

Claim 30 (Previously Presented): The exercise system according to claim 26, wherein the predetermined inputs comprise exerciser identifiers.

Claim 31 (Previously Presented): The exercise system according to claim 26, wherein exercisers other than reserving exercisers are locked out from using reserved exercise terminals for a predetermined period of time.

Claim 32 (Previously Presented): The exercise system according to claim 25, wherein the interface comprises a display showing reservable exercise terminals.

Claim 33 (Previously Presented): The exercise system according to claim 32, wherein the display displays the current use status of the exercise terminals.

Claim 34 (Previously Presented): The exercise system according to claim 33, wherein the current use status comprises time remaining in exercise programs for currently used exercise terminals.

Claim 35 (Previously Presented): The exercise system according to claim 25, wherein the interface displays graphical representations of the exercise terminals.

Claim 36 (Previously Presented): The exercise system according to claim 25, wherein the interface is usable to reserve exercise terminals for use at particular times of day.

Claim 37 (Previously Presented): The exercise system according to claim 25, wherein the interface is usable to reserve particular exercise terminals for use when these terminals become available.

Claim 38 (Previously Presented): The exercise system according to claim 25, wherein the interface is usable to reserve the first available exercise terminal of a particular type for use.

 Claim 39 (New): An exercise system, comprising:
a plurality of exercise machines; and
a computer connected to the exercise machines via a communication link, the computer comprising a user interface usable by an exerciser for scheduling future use of at least one of the exercise machines.

Claim 40 (New): The system according to claim 39, wherein the user interface is usable to schedule the future use for a particular time.

Claim 41 (New): The system according to claim 39, wherein the at least one exercise machine is reserved for use only by the exerciser based on the scheduling.

Claim 42 (New): The system according to claim 41, wherein the at least one exercise machine is reserved for a predetermined period of time.

Claim 43 (New): The system according to claim 39, wherein the computer generates a notification for the exerciser based on the scheduling.

Claim 44 (New): An exercise machine comprising:

a moveable element for movement while an exerciser exercises; and
a user interface usable by the exerciser for scheduling future use of another exercise machine.

Claim 45 (New): The exercise machine according to claim 44, further comprising:
a processing system for controlling the moveable element.

Claim 46 (New): The system according to claim 44, wherein the user interface is
usable to schedule the future use for a particular time.

Claim 47 (New): The system according to claim 44, wherein the other exercise
machine is reserved for use only by the exerciser based on the scheduling.

Claim 48 (New): The system according to claim 47, wherein the other exercise
machine is reserved for a predetermined period of time.

Claim 49 (New): An exercise machine comprising:
a moveable element for movement while an exerciser exercises;
a communication link interface for receiving a signal indicative of the availability of
another exercise machine; and
a user interface for providing, based on the received signal, a notification for notifying the
exerciser of the availability of the other exercise machine.

Claim 50 (New): The exercise machine according to claim 49, further comprising:
a processing system for controlling the moveable element.

Claim 51 (New): An exercise machine monitoring system for monitoring a plurality
of exercise machines connected to a communication link, comprising:

a communication link interface connected to the communication link;

a processing system coupled to the communication link interface for monitoring the
exercise machines; and

a display responsive to the processing system for displaying the current status of at least
one of the exercise machines.

Claim 52 (New): The system according to claim 51, wherein the communication link
comprises a wireless communication link.

Claim 53 (New): The system according to claim 51, wherein the current status of the
at least one exercise machine comprises the current use/non-use status of the at least one exercise
machine.

Claim 54 (New): The system according to claim 51, wherein the display further
displays location data for the at least one exercise machine.

Claim 55 (New): An exercise machine scheduling system for scheduling use of an
exercise machine connected to a communication link, comprising:

a communication link interface coupled to the communication link;

a processing system; and

a user interface usable by an exerciser for scheduling a future use of the exercise machine.

 Claim 56 (New): The system according to claim 55, wherein the user interface comprises a display for displaying the current status of the exercise machine.

Claim 57 (New): The system according to claim 55, wherein the user interface is usable for scheduling the future use for a particular time.

Claim 58 (New): The system according to claim 55, wherein the processing system generates a notification for the exerciser based on the scheduling.
